Acknowledgements

Ballad Health sincerely thanks the members of the Regional Steering Committee and its collaborative partners for their dedication and collaboration during this assessment process. Dr. Paula Masters, chief health disparities officer at Ballad Health, is the senior executive sponsor for the assessment process.

The Core Team, supported by the Community Engagement Team, conducted the assessment and prepared this report.

Executive Summary

Ballad Health is deeply committed to the health and well-being of our communities. By merging two legacy health systems, we have strengthened our focus on understanding and addressing the socioeconomic factors that impact health. We recognize that health is influenced by more than genetics — access to care and health literacy are vital. As the region's largest employer, we are dedicated to collaborating with our communities to create lasting health improvements that will benefit future generations.

Ballad Health and its hospitals have pledged to improve the health of our service area counties by focusing on access, quality and population health measures. These metrics enable Ballad Health to collaborate with our communities and address the region's health disparities and access challenges. Through the Community Health Needs Assessment (CHNA) process, we have gained valuable insights into the health disparities within our communities and prioritized the most pressing issues in each hospital's service area. This collaborative approach helps us educate and drive meaningful change, ensuring better health outcomes for all.

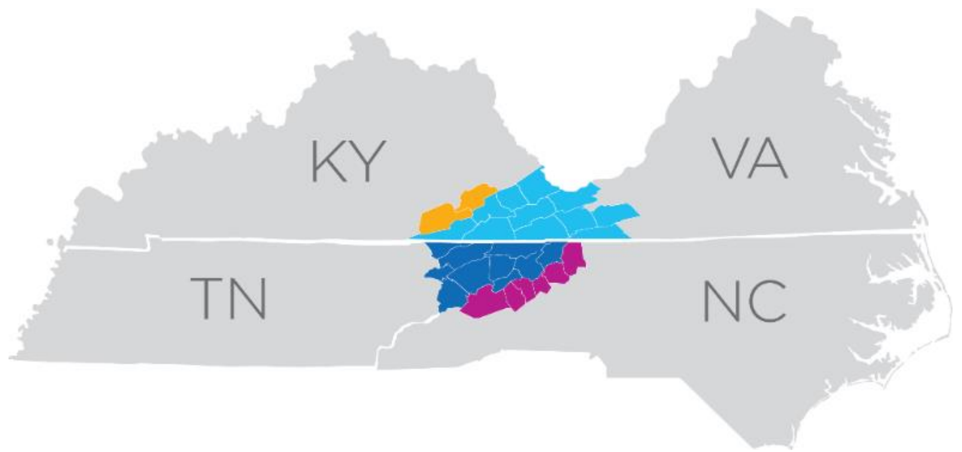
To assess the health of those living in our service area, Ballad Health utilized the Mobilizing for Action through Planning and Partnerships (MAPP 2.0) framework. This comprehensive assessment was conducted from summer 2023 through spring 2024. We gathered primary data through surveys with community partners and members, as well as stakeholder meetings. Additionally, we compiled secondary data from national, state, regional and county sources. This thorough approach helps us understand and address the unique health needs of our communities.

Throughout the community health needs assessment process, we focused on identifying health priorities and disparities within each community. Community members ranked the top three health issues in their area, providing valuable local insights. Combining these perspectives with county, state and national data gives us a comprehensive view of the region's health. This foundation helps us develop effective solutions to improve health outcomes for all.

The community health needs assessment identified chronic disease, behavioral and mental health and obesity and overweight as the top three health priorities in Northeast Tennessee, especially in Sullivan County. These issues emerged as the most pressing health concerns based on data from various sources, including local perspectives and community surveys. Addressing these critical areas allows us to focus efforts on improving overall health outcomes and quality of life in the region.

Ballad Health

Introduction



Ballad Health is an integrated community health improvement organization serving 29 counties of the Appalachian Highlands in Northeast Tennessee, Southwest Virginia, Northwest North Carolina and Southeast Kentucky. Our system of 20 hospitals, post-acute care and behavioral health services, and a large multi-specialty group physician practice works closely with an active independent medical community and community stakeholders to improve the health and well-being of close to one million people. By leading in the adoption of value-based payments, addressing health-related social needs, funding clinical and health systems research and committing to long-term investments in strong children and families in our region, Ballad Health is striving to become a national model for rural health and healthcare.

Ballad Health Hospitals

Ballad Health

Mission

Honor those we serve by delivering the best possible care

Vision

To build a legacy of superior health by listening to and caring for those we serve

Values

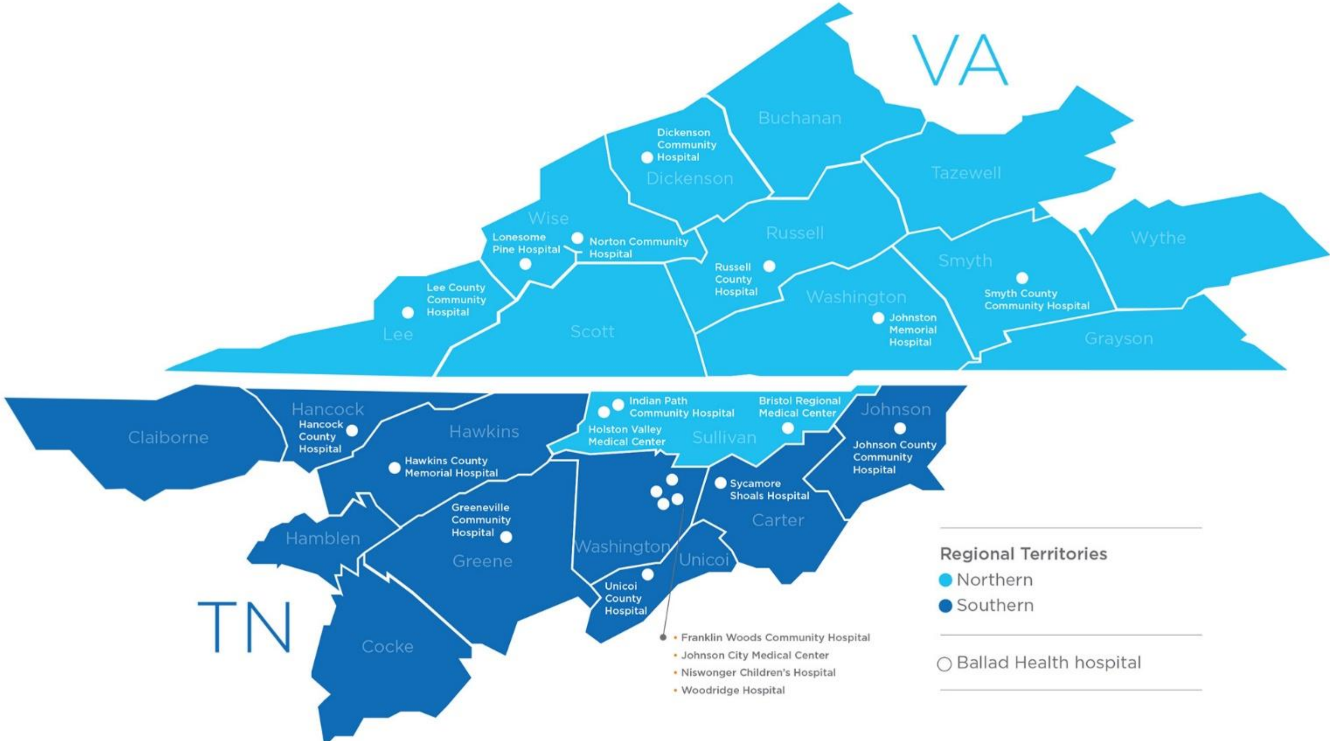
- Caring
- Creativity
- Faith
- Honesty
- Quality
- Respect

Ballad Health was created to address local health needs. We understand that good health is about more than healthcare – it’s the story of people’s lives. Located in the Appalachian Highlands, Ballad Health honors the traditions and stories that shape our community. We also seek new ways to partner with individuals and communities to make our region a healthier place to live and work.

Ballad Health

Territory

Ballad Health is the region's largest healthcare provider. Our primary service area includes 21 counties in Northeast Tennessee and Southwest Virginia, with a secondary area extending to six counties in Western North Carolina and two in Southeastern Kentucky.



Facility Description

Indian Path Community Hospital

Located in Kingsport, Tennessee, Indian Path Community Hospital has been serving our region for 50 years. The hospital provides an array of inpatient and outpatient medical and surgical services, as well as emergency care for adults and pediatrics, the Barbara Humphreys Family Birth Center, diagnostic imaging services, neurophysiology services, adult and pediatric physical therapy and an accredited center for sleep disorders. Indian Path is also home to a Regional Cancer Center, which provides comprehensive cancer treatment that includes medical and radiation oncology, diagnostic radiology, transfusion, infusion therapies and the Appalachian Highlands' only gynecological surgical oncology specialist. Renovation plans are also underway, and Indian Path will soon house the region's only comprehensive Center for Women and Babies.

Scope of services

- Ballad Health Medical Associates Spine and Rehabilitation
- Barbara Humphreys Family Birth Center
- Cancer care
- Center for Healthy Aging
- Center for Post-COVID Care
- Center for Sleep Disorders
- Emergency services
- Imaging
- Laboratory
- Neurodiagnostics
- Pediatric emergency services
- Pediatric rehabilitation
- Respiratory
- Sleep lab
- Surgery and Robotics
- Transitional care clinic
- Urology

Indian Path Community Hospital's primary service area covers Sullivan County in Northeast Tennessee and surrounding counties in Southwest Virginia.

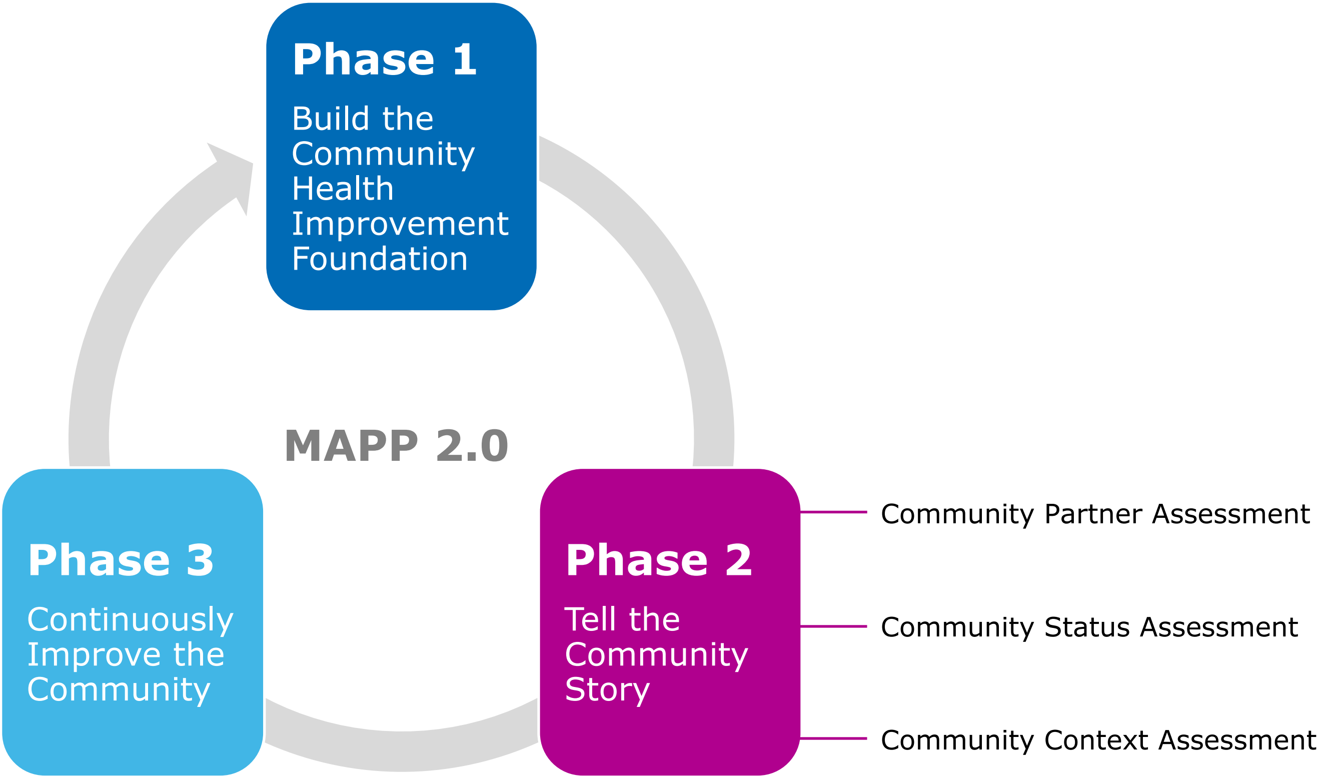
Evaluation model

Model selection : MAPP 2.0

For the Community Health Needs Assessment (CHNA) of Indian Path Community Hospital, we adopted the MAPP 2.0 model developed by the National Association of County and City Health Officials (NACCHO). This updated framework, released in July 2023, builds on our successful use of the original MAPP in 2021. MAPP 2.0 enhances community health planning by integrating modern practices and tools to address current public health challenges. It emphasizes equity, partnerships and data-driven decision-making, making it ideal for our assessment efforts. By implementing MAPP 2.0, we aimed to build on our previous successes, produce actionable insights and foster sustainable improvements in community health outcomes.

MAPP 2.0: Model overview

Mobilizing for Action through Planning and Partnerships (MAPP), developed by NACCHO in 2001, is a respected community health improvement framework. This strategic planning process helps communities evaluate public health needs, prioritize issues and create strategies for a unified health improvement plan. In 2019, NACCHO updated the framework to MAPP 2.0, incorporating best practices and feedback from experts. Tested by fifteen diverse health departments, MAPP 2.0 emphasizes community engagement, data-driven assessments and health equity. It streamlines the process from six phases to three, with new tools and resources. MAPP 2.0 empowers communities to identify health priorities, develop effective strategies and mobilize partnerships, fostering sustainable and equitable health solutions.



MAPP 2.0: Phases

Phase 1 : Build the Community Health Improvement Foundation

This phase sets the stage for the MAPP process. It includes guidance to build strategic relationships based on a Stakeholder and Power Analysis, conduct a Starting Point Assessment to take inventory of resources and set goals for process improvement, cultivate a shared mission and vision for MAPP and develop a common understanding of how MAPP can be used to achieve health equity.

Phase 2 : Tell the Community Story

This phase results in a comprehensive, accurate and timely community assessment of health and wellbeing based upon findings from three assessment tools. It maintains the need for data and information from several perspectives, including qualitative and quantitative, with a greater emphasis on understanding health inequities.

Community Partner Assessment

Data and conversations about partnerships and organizational capacities.

Community Status Assessment

Quantitative data about community, including demographics, health status, SDOH, health equity indicators, and across all of these variables, existing inequities.

Community Context Assessment

Qualitative data about community strengths and assets, built environment, and current and historical forces of change.

Phase 3 : Continuously Improve the Community

This phase includes steps to address the social determinants of health (SDOH) and health equity through transformational strategies. It encourages strategic partnerships for sustained action, through partner profiles and a power analysis that best position partners to address inequity as it relates to each community health improvement plan (CHIP) goal. This phase also employs methods of continuous quality improvement and rapid cycle improvement to promote sustained, data-driven action which allows for building an evidence base through small-scale improvements on existing strategies and small-scale testing on new, innovative strategies for health equity action.

Methodology

Methodology

Phase 1 : Build the Community Health Improvement Foundation

In the first phase of MAPP 2.0, Ballad Health leadership focused on identifying key stakeholders and community partners essential for the assessment efforts. To maximize collaboration and minimize survey fatigue among community members, Ballad Health aimed to integrate efforts with other organizations conducting similar assessments. This collaborative approach ensured a unified effort rather than multiple, redundant inquiries. Stakeholders were identified through existing partnerships and a comprehensive stakeholder analysis, ensuring broad and effective community engagement. By fostering these collaborations, Ballad Health created a Regional Steering Committee that was tasked with overseeing the assessment efforts, from design to implementation.

The Regional Steering Committee was comprised of 15 members and included representation from Ballad Health, Tennessee Department of Health, Virginia Department of Health, and the regional STRONG Accountable Care Community (ACC), which represents over 400 member organizations.

Phase 1: Build the Community Health Improvement Foundation

In July 2023, Ballad Health organized a comprehensive, full-day, in-person Kick-Off Retreat for the Regional Steering Committee. This retreat set the foundation for a thorough and inclusive community health improvement process. During this retreat, committee members did the following:

- Conducted a Starting Point Assessment as prescribed by MAPP 2.0
- Collaboratively developed the mission, vision, and values to guide the assessment efforts
- Identified key primary and secondary data metrics to be included
- Formulated questions for a community-wide survey
- Devised a strategy for collecting qualitative data

Phase 1: Community Health Improvement Foundation

Mission

This group exists to include the voices of all groups within the community, especially those experiencing health inequities, to improve population health.

Vision

A committed collective to build on the strengths of our communities, develop goals to overcome our challenges, and inspire our neighbors to work together for a healthier next generation.

Values

Phase 2: Tell the Community Story

As outlined in Phase 1 of MAPP 2.0, the Regional Steering Committee played a crucial role in guiding Ballad Health's approach to conducting the three MAPP 2.0 assessments. This committee was responsible for determining the necessary data to be collected and the methods for gathering this information. Their input ensured that the assessments would capture a comprehensive and accurate picture of community health needs.

Additionally, the steering committee contributed to the design of the assessment instruments, ensuring they were effective and comprehensive. Through a series of collaborative discussions and workshops, the committee identified key metrics and data sources that would provide valuable insights. They also worked on tailoring the instruments to reflect the unique characteristics and needs of the community, making sure to include metrics that are often overlooked in traditional Community Health Needs Assessments (CHNAs).

The committee's involvement extended beyond data collection and instrument design. They also played a vital role in strategizing the dissemination of the surveys and assessments, leveraging their networks to ensure broad and diverse participation.

Phase 2: Tell the Community Story

Community Status Assessment (CSA)

The Community Status Assessment (CSA) involved both primary data collection and the compilation of secondary data.

Primary Data Collection

Ballad Health conducted a community member survey to gather primary data. The survey was developed using evidence-based questions identified through an extensive literature review of community-wide surveys. After discussions and guided exercises with the Steering Committee to finalize the questions, the resulting survey comprised 44 questions covering demographics, community perceptions, access to care, child health and wellbeing, personal health and wellbeing, adverse childhood experiences, and resiliency. The survey was available in both online and paper formats, and a Spanish version was also offered. It was tested among Ballad Health team members before its launch in December 2023 and remained open through March 2024.

The survey was distributed through various channels. Ballad Health marketing and communications assisted with distribution through emails to Ballad Health team members encouraging them to participate and share the survey with friends and family and posts on Ballad Health's social media pages. The STRONG ACC provided the survey to over 400 member organizations for further dissemination among their staff, clients, and contacts. Lastly, Steering Committee members assisted in spreading the survey through their respective organizations. For example, the Virginia Department of Health assisted in the distribution of the survey through taking the paper version of the survey into low-income housing developments.

Secondary Data Collection

The Regional Steering Committee played a vital role in selecting secondary data elements for the assessment. They focused on highlighting metrics often omitted from Community Health Needs Assessments (CHNAs), ensuring comprehensive coverage through discussions and guided exercises. The secondary data compilation involved various sources, including the Centers for Disease Control and Prevention (CDC), National Institutes of Health (NIH), Tennessee and Virginia Health Departments, Tennessee and Virginia Departments of Education, and the United States Census.

Data was collected at the county level to create specific data packages covering topics such as demographics, health behaviors, health outcomes, social and economic factors, physical environment, and the healthcare workforce. For comparison purposes, regional averages for the Appalachian Highlands, state, and national levels were also provided. The compiled regional data packages were not only used in the assessments but also circulated to Ballad Health's community partners for presentations, grant writing, and other purposes.

Phase 2: Tell the Community Story

Community Partner Assessment (CPA)

As a second avenue for primary data collection, Ballad Health launched a Community Partner Assessment. This assessment was based on the Community Partner Survey from the MAPP 2.0 Handbook developed by NACCHO, which was slightly modified to better suit the specific needs and context of Ballad Health's Community Health Needs Assessment (CHNA) process.

The Community Partner Survey, which was 37 questions in length, explored several key topics, including Organizational Information, Populations Served, Technology in Health, Organizational Commitment to Health Equity, Organizational Accountability, and Data Access and Systems. These topics were chosen to provide a comprehensive understanding of the capacities, challenges, and focus areas of community partners involved in health improvement efforts.

The survey was open from March 2024 to May 2024 and was distributed to various stakeholders, including STRONG ACC's 400 member organizations, Ballad Health's Community Health Improvement Sites, and other community partners identified by the Steering Committee. This wide distribution ensured a broad and representative collection of insights from diverse organizations working towards health improvement in the community.

Community Context Assessment (CCA)

The Community Context Assessment involved collecting primary, qualitative data to support the assessment process. Ballad Health accomplished this by hosting two stakeholder convenings on special topics identified through ongoing discussions with community partners. Each convening adopted an action-driven approach. Ballad Health compiled data and literature findings to illustrate the severity of the issues under discussion, ensuring stakeholders had the necessary foundational and contextual information before group discussions.

At the start of each convening, Ballad Health presented the relevant data and findings. Stakeholders then engaged in guided exercises and discussions to generate potential solutions and action items to address the identified problems. These discussions also aimed to identify synergies and paths for collaboration among community partners. The topics explored in these stakeholder convenings were substance use and early literacy.

Phase 3: Continuously Improve the Community

Phase 3 of the MAPP 2.0 framework focuses on the continuous improvement of the community. As part of this phase, presentations on Ballad Health's Community Health Needs Assessment (CHNA) process were provided to each of the hospital boards to promote engagement and secure buy-in ahead of the development of Community Health Improvement Plans (CHIPs). These presentations aimed to ensure that hospital leadership fully understood the CHNA process and were committed to the subsequent steps.

The CHIPs will be developed by each facility based on the CHNA findings and will involve collaboration between hospital leadership and community partners in their design and implementation. Each CHIP will outline specific, actionable strategies tailored to address the priority health issues identified in the CHNA. These strategies will include measurable objectives, timelines, and assigned responsibilities to ensure accountability and progress tracking.

Recognizing the complexity of the identified health issues, Ballad Health emphasizes the importance of collaboration, ensuring that all partners have a seat at the table. This inclusive approach is essential for addressing the multifaceted health challenges that no single entity can manage alone. By fostering strong partnerships and collective action, Ballad Health aims to create effective and sustainable health improvement strategies for the community.

Furthermore, the development of CHIPs will include regular progress reviews and updates to adapt to emerging needs and challenges. This dynamic process ensures that the plans remain relevant and effective over time, continually improving health outcomes in the community. Through these comprehensive and collaborative efforts, Ballad Health is committed to making meaningful and lasting improvements in community health.

Results

Community Status Assessment:
Community Profiles

Including community demographics and social determinants of health (SDOH) data in CHNAs is crucial because it provides a comprehensive understanding of the factors influencing health outcomes in a community. Demographic data, such as age, race, income, and education levels, helps identify vulnerable populations and disparities in health status. SDOH data, which includes factors like access to healthcare, housing, transportation, and social services, offers insight into the broader context affecting community health. This information is essential for identifying health priorities, allocating resources effectively, and developing targeted interventions that address both immediate health needs and underlying causes of health inequities. By integrating these data, CHNAs can better inform public health strategies and policies, ultimately leading to more equitable and effective health outcomes.

In order to provide the necessary context for the remainder of the CHNA findings, secondary data related to demographics, SDOH, and health outcomes are provided in the following tables. More robust community profiles for Sullivan County, Tennessee are provided in the appendix.

Community Status Assessment:

Community Demographic Profile

Data Indicator	Sullivan	Ballad Health GSA	Tennessee	USA

Community Status Assessment:
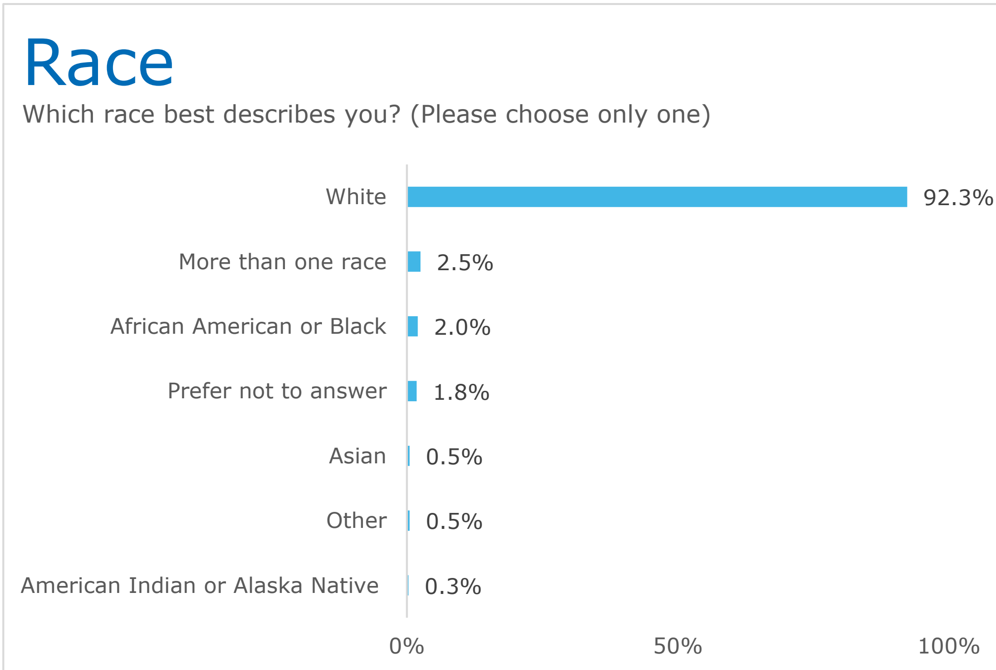
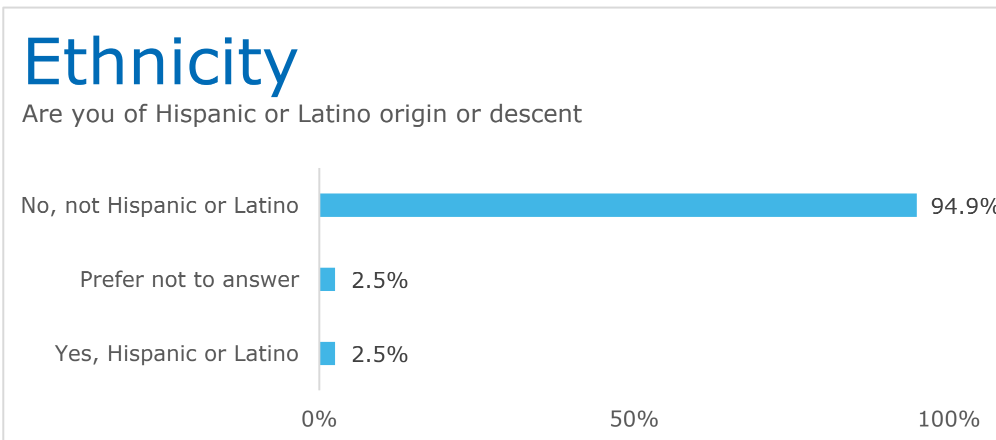
Community Member Survey Northeast Tennessee

Total Respondents

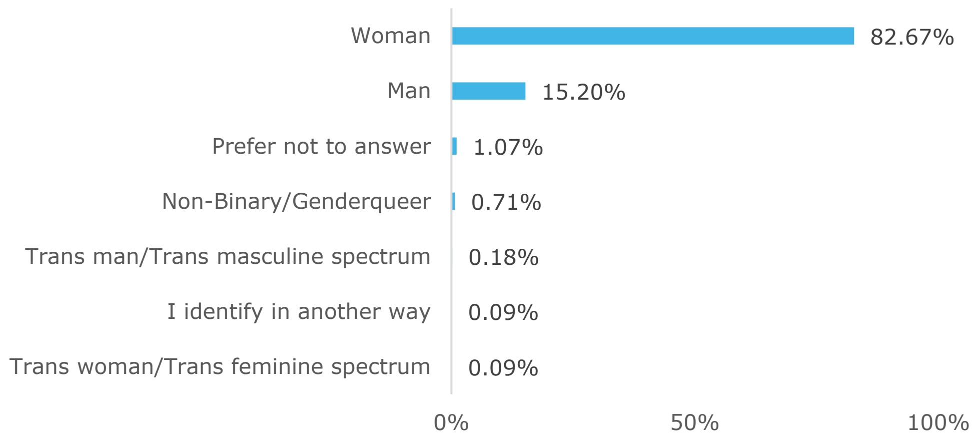
A total of **1,130** community members living in Northeast Tennessee participated in Ballad Health's community member survey.



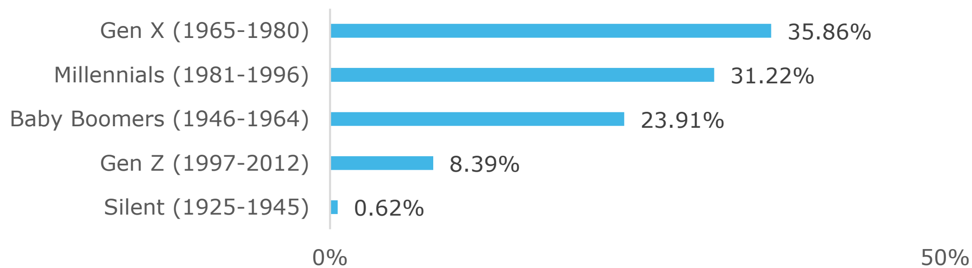
Among Northeast Tennessee respondents the majority (92%) were White. This was followed by more than one race (2.5%), and African American or Black (2.05%).



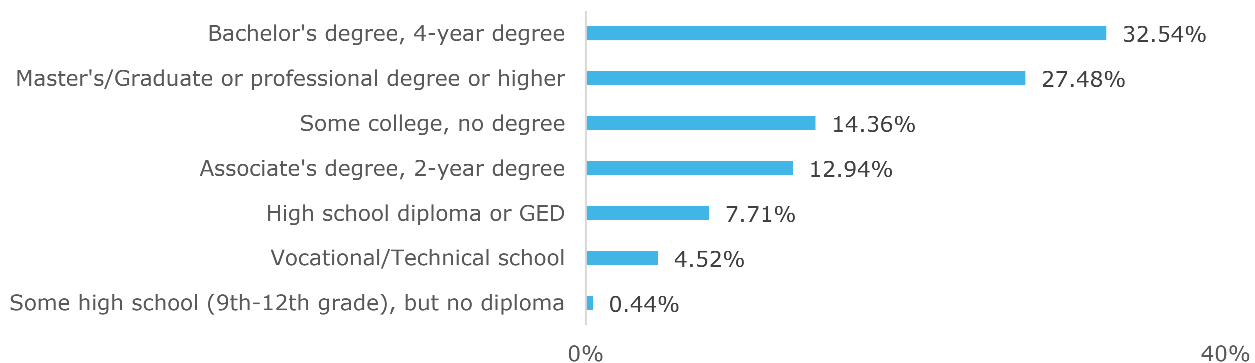
Additionally, 95% of respondents identified as not Hispanic or Latino, 2.5% preferred not to answer, and 2.5% identified as Hispanic or Latino.



The majority of Northeast Tennessee community members that answered the survey identified as women (83%). This was followed by Men (15%).



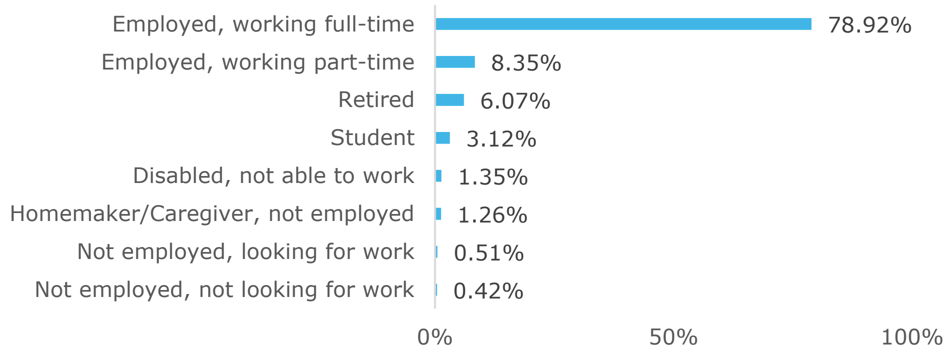
Survey respondents were asked to identify their generational group, resulting in 36% identifying as Gen X, 31% as Millennials, and 24% as Baby Boomers.



Additionally, 33% of respondents have a bachelor’s degree, 27% have a master’s/graduate degree, and 14% have some college, no degree.

Employment

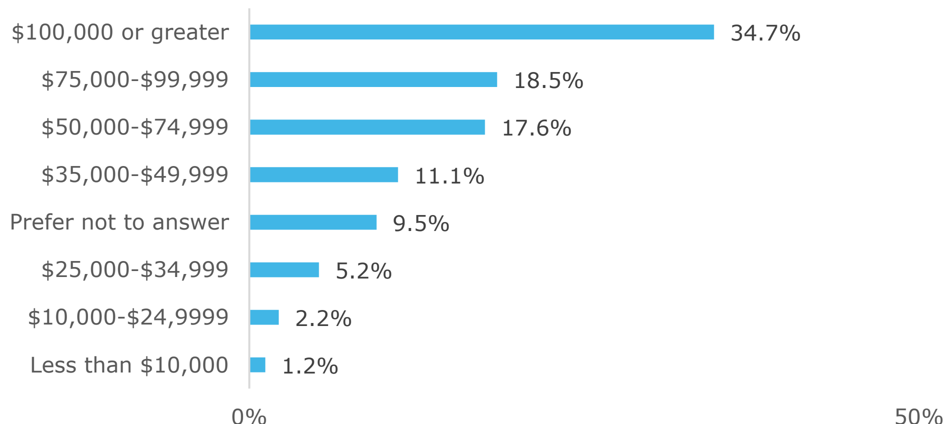
Which of the following categories best describes your employment status? (Choose all that apply)



Survey respondents were asked to provide their current employment status. Seventy-nine percent (79%) of respondents were employed, working full-time, 8% employed, working part-time, and 6% were retired.

Household income

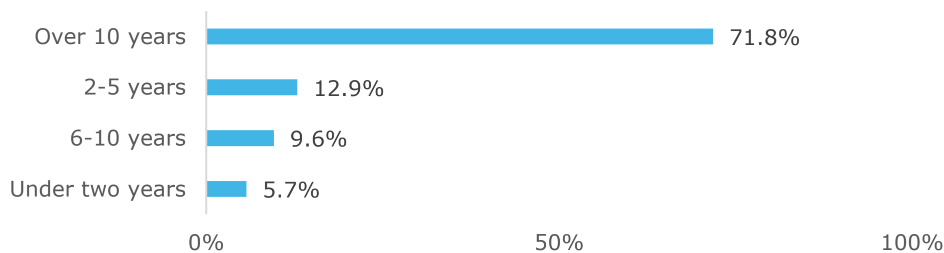
How much total combined income did all people living in your home earn last year?



Among respondents to the community health needs assessment from Northeast Tennessee, 35% households make $100,000 or greater, 18.54% make $75,000 - $99,999, and 17.57% make $50,000 - $74,999.

Community resident

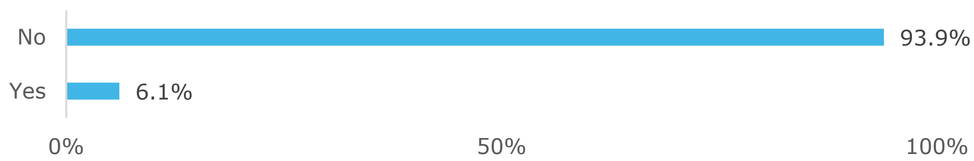
How long have you been a member of the community that you currently live in?



In Northeast Tennessee, 72% of survey respondents have been a community member for over 10 years, 13% for 2-5 years, and 10% for 6-10 years.

Sexual orientation

Do you identify as a member of the LGBTQIA+ community?

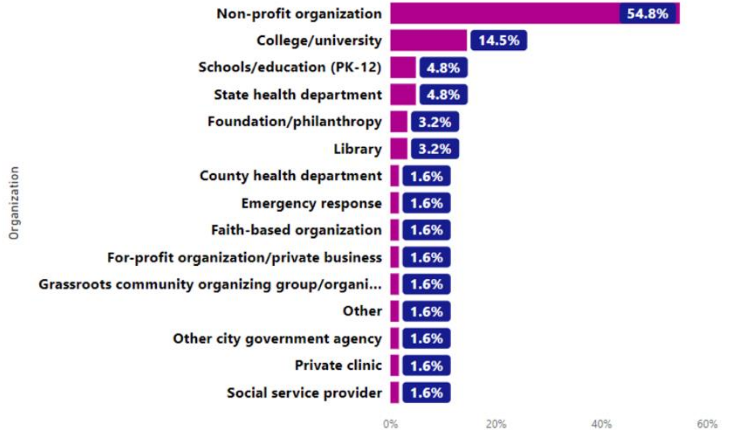


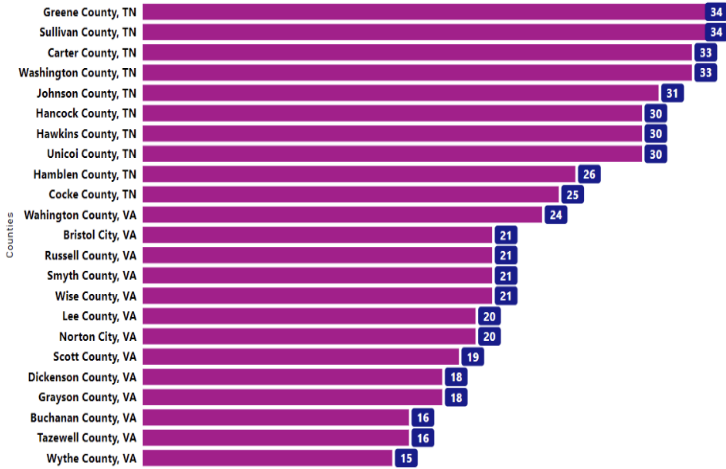
When survey respondents were asked if they identify as members of the LGBTQIA+ community, 6% indicated that they do.

Community Partner Assessment:
Community Partner Survey

Organization Type

Ballad Health's Community Partner Survey received responses from 54 distinct organizations. The majority (55%) were non-profit organizations. This was followed by colleges and universities (15%), schools and educational institutions (PK-12) (5%) and state health departments (5%).





Each county in Tennessee and Virginia within Ballad Health's service area is served by at least 15 organizations that responded to the Community Partner Survey, ensuring the survey's geographic representation of the region. Thirty-four of organizations who responded to the survey serve both Greene and Sullivan County, making them the two counties most represented.

Vulnerable Populations Served

The organizations that responded to the survey serve a wide range of vulnerable populations, which is vital to ensuring that the needs of the most marginalized individuals in our community are represented in these survey findings. Specifically, 10% of the organizations work with low-income individuals, 9% with children, 8% with racial and ethnic minorities, 7% with homeless/unhoused individuals, 7% with uninsured individuals and 7% with the LGBTQIA+ community.

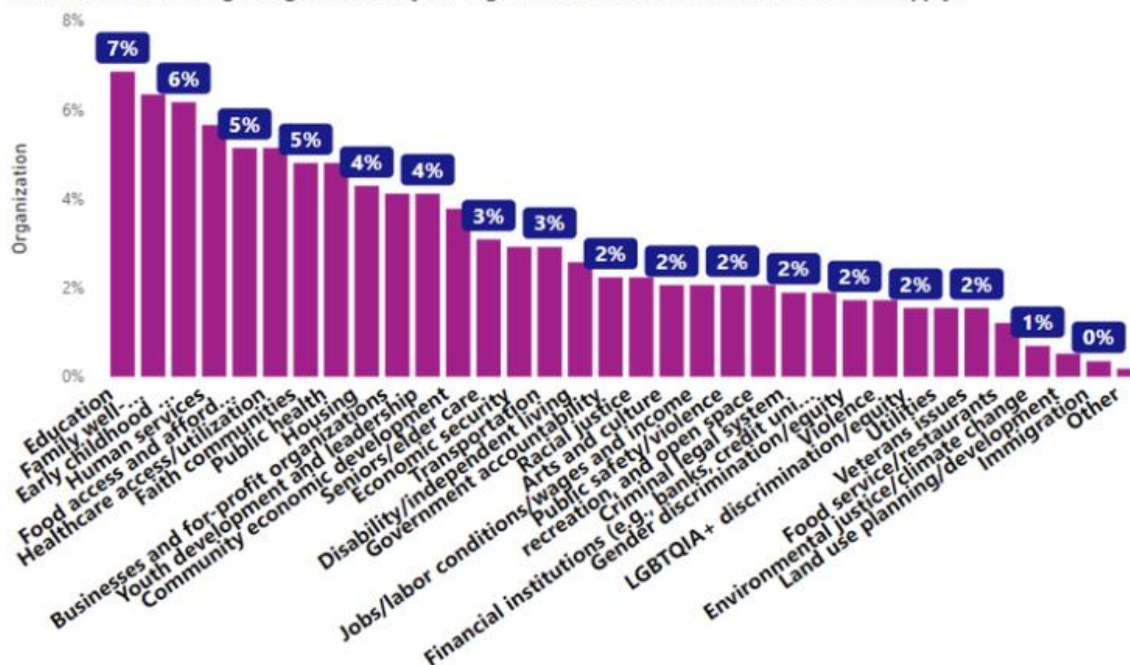
Community Partner Survey

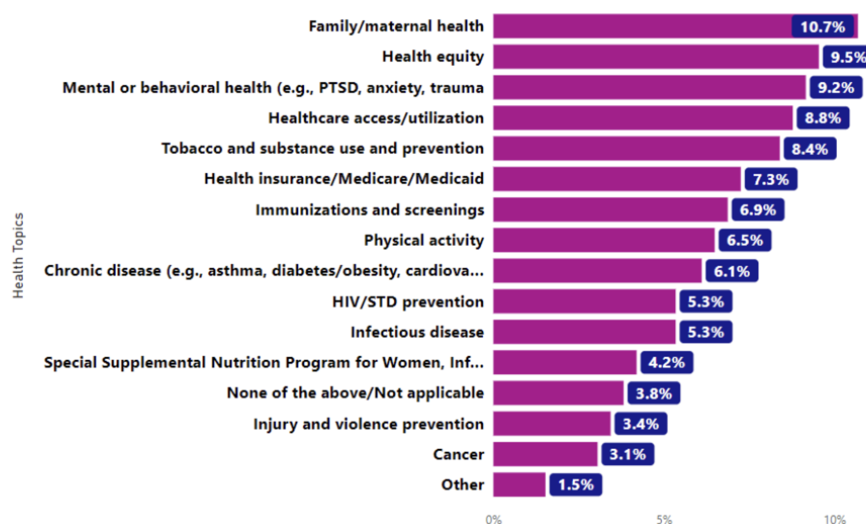
Service Categories



The organizations that responded to the survey operate across a diverse range of categories, including education (7%), family well-being (6%), early childhood development (6%), human services (5%), food access and affordability (5%), healthcare utilization (5%) and faith communities (5%).

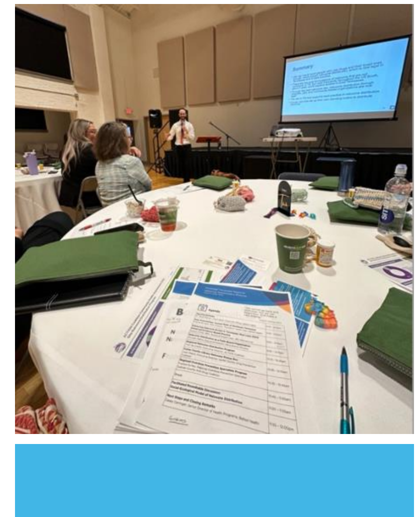
Health Topics

The organizations that responded to the survey address various health topics, which is essential for fostering strong relationships between the health system and community partners. The key areas of focus include: family/maternal health (11%), health equity (10%), mental or behavioral health (9%), healthcare access/utilization (9%) and tobacco and substance use prevention (8%).



Community Context Assessment:
Regional Stakeholder Convening - Substance Use

On February 28th, 2024, a significant Stakeholders Convening on Substance Use was held at the Langston Centre in Johnson City, Tennessee. The event gathered 55 attendees representing 25 organizations including healthcare providers, community leaders, policymakers and representatives from various local groups. The primary focus was on naloxone distribution, a crucial intervention for preventing opioid overdose deaths.



The convening featured six insightful presentations. Attendees were provided an overview of substance use trends and the impact of naloxone in the region. Discussions included new laws that facilitate evidence-based practices for naloxone distribution and the role of faith-based groups in making naloxone accessible to their communities. The regional program's strategies and successes in distributing naloxone were highlighted, along with an innovative approach where library boxes serve as pickup points for naloxone kits. Additionally, the work of specialists dedicated to overdose prevention and response in the region was detailed.

The event also included a facilitated roundtable discussion guided by a socio-ecological model of naloxone distribution, developed by Ballad Health from an extensive review of literature. This model considers the complex interplay between individual, relationship, community and societal factors in effectively distributing naloxone and preventing overdoses.

The convening provided a platform for stakeholders to share knowledge, discuss challenges and collaborate on strategies to enhance naloxone access and distribution. It underscored the community's commitment to addressing substance use issues through innovative and evidence-based approaches, aiming to save lives and improve public health outcomes.

Community Context Assessment:
Regional Stakeholder Convening - Substance Use

Social-Ecological Model for Naloxone Distribution

Organizational

- Lack of training on the importance of naloxone
- Lack of educational training on naloxone administration (nasal spray and injection)
- Lack of collaboration with local services such as fire department, law enforcement, schools and community centers for naloxone distribution
- Misinformation about naloxone within organizations, e.g. (the availability of this medication encourages drug use, efficacy after expiration, lengthy training requirements)
- Lack of on-site supplies of naloxone for "rescue" dosing in case of opioid overdose
- Lack of standardization in prescribing practices for naloxone
- Lack of adequate time for healthcare professionals to educate patients
- Lack of data and tracking for naloxone distribution, especially at the local level
- Lack of prioritization of naloxone in financial budgets/plans for organizations that sere individuals that use drugs

INTRApersonal

- Demographics (age, race, environment)
- Fear of legal action as someone with SUD
- Limited knowledge about what naloxone is and how it can be used, e.g. (efficacy after expiration, training requirements)
- Confusion around insurance coverage for naloxone or an inability to pay
- Lack of awareness of how and where to get naloxone
- Fear of discrimination
- Lack of trust in Health Professionals
- Fear and experience of side-effects

Community

- Societal stigma around carrying naloxone
- Community attitude towards individuals with SUD
- Limited access to naloxone in communities, especially those lacking adequate health facilities and pharmacies
- Lack of engagement with local community groups, churches and schools in opioid overdose education
- Inadequate awareness and training among the general public regarding the identification and management of opioid overdoses
- Widespread misinformation
- Rurality
- Lack of Take Home naloxone (THN) Programs
- Lack of knowledge and stigma around low-cost naloxone options
- Lack of naloxone distribution directly to impacted individuals; e.g. (family members of individuals at risk); misalignment of priorities for at-risk individuals

INTERpersonal

- No support system or reluctant to reach out for help
- Strained relationships with family, peers, and providers
- Provider bias and beliefs about naloxone and SUD
- Belief that providing naloxone would lead to continued or riskier opioid use in the future (family or peers)
- Lack of knowledge of legal liability related to naloxone administration
- Lack of knowledge about overdose, such as indications for use, and prevention
- Lack of confidence or competence in using naloxone
- Misinformation about needing lengthy training in order to administer naloxone

Policy

- Lack of policymaker's support for free naloxone distribution in some high opioid consumption regions
- Lack of legislation addressing the deficit in naloxone manufacturing is making the drug more scarce across the country
- Regulatory barriers that restrict who can distribute and administer naloxone
- Affordability of naloxone
- Lack of data and tracking for naloxone distribution, especially at the local level
- Lack of family-friendly naloxone distribution and outreach
- Packaging/portability of nasal naloxone

Community Context Assessment:
Regional Stakeholder Convening – Early Literacy

Literacy in the Appalachian Highlands is a pressing issue, with social determinants of health, access to basic needs and strategic management all playing a role. During this convening, held on April 3, 2024 at Bristol Regional Medical Center, emphasis was placed on collaboration among organizations to better serve children, remove barriers, improve family engagement and strengthen partnerships. There were 44 stakeholders in attendance, composed of community partners who address early literacy and early childhood development.

At the regional stakeholder convening for early literacy, stakeholders were first presented with data illustrating the current state of early literacy in the Appalachian Highland region. The data included information on third-grade reading levels, the negative impacts of poor early literacy skills, Adverse Childhood Experiences (ACEs) and the racial and socioeconomic disparities in the relationship between children's early literacy skills and third-grade outcomes.

Stakeholders were then asked to participate in a N.O.I.S.E. analysis. N.O.I.S.E. stands for Needs, Opportunities, Improvements, Strengths and Exceptions. This strategic planning technique helps to identify what works well and determine areas for improvement. Here's how it was used in the convening:

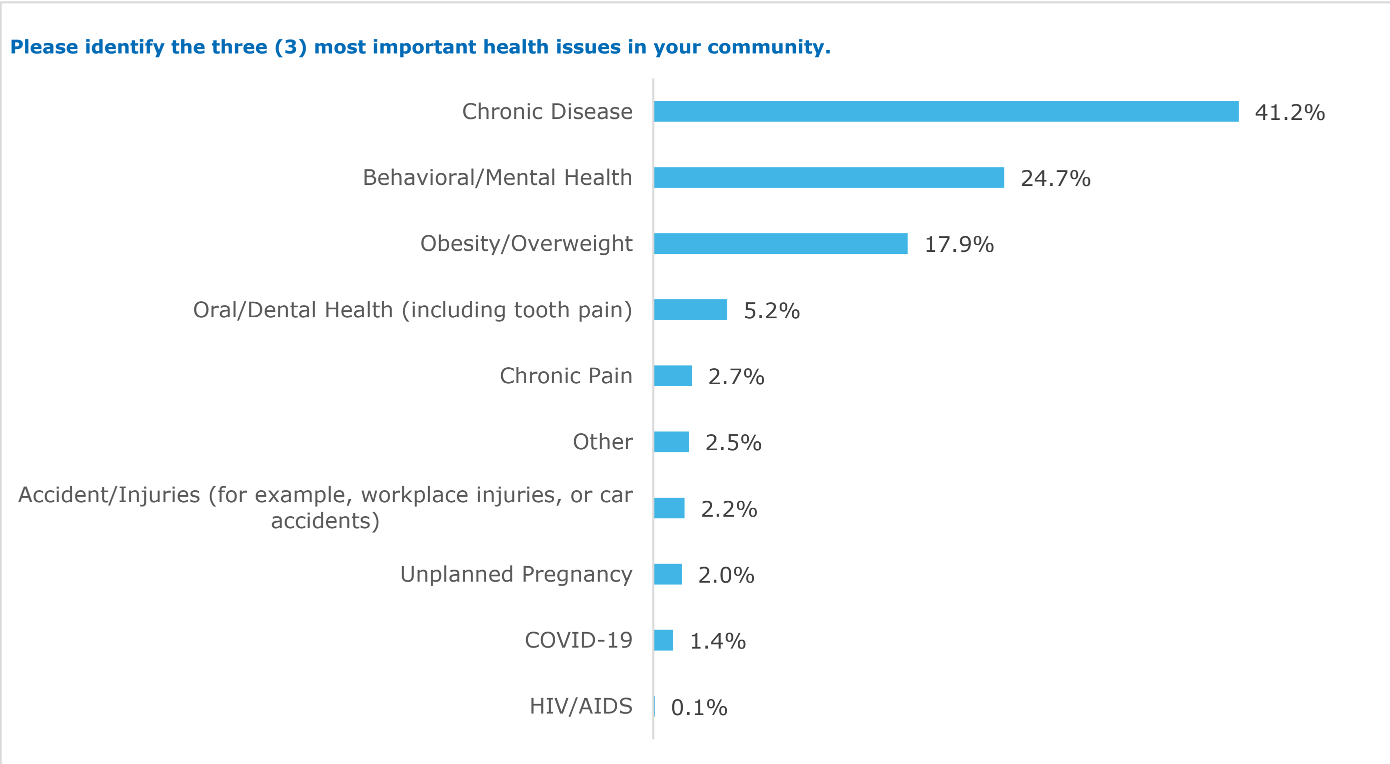
- **Needs**: Stakeholders identified essential requirements or gaps that must be addressed to improve early literacy, including the need for a more collective impact approach that includes a focus on social determinants of health and adverse childhood experiences.
- **Opportunities:** Participants explored potential areas for growth or positive change, such as new community partnerships or funding opportunities to support literacy programs.
- **Improvements**: The group discussed current processes and practices that could be enhanced, such as strengthening the literacy workforce and increasing access to early childhood education resources.
- **Strengths**: Stakeholders recognized existing advantages and resources within the region, such as dedicated educators and supportive community organizations that could be leveraged to advance literacy initiatives.
- **Exceptions**: Unique factors or circumstances were also considered, such as the need for a cultural shift that values literacy.

By conducting a N.O.I.S.E. analysis, stakeholders gained a comprehensive understanding of the current landscape and collaboratively developed actionable strategies to enhance early literacy outcomes in the Appalachian Highland region.

Health Priorities

Health Priorities in Northeast Tennessee

Residents who participated in the community member survey were asked to identify the three most important health issues in their community from a provided list. The results indicated that the most important health issues were chronic diseases (41%), behavioral/mental health (25%) and obesity/overweight (18%).



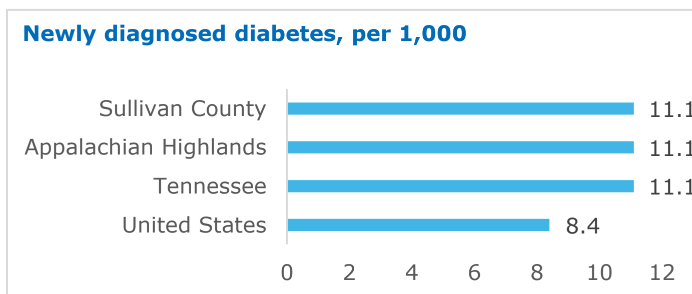
Chronic Disease in Sullivan County

Diabetes

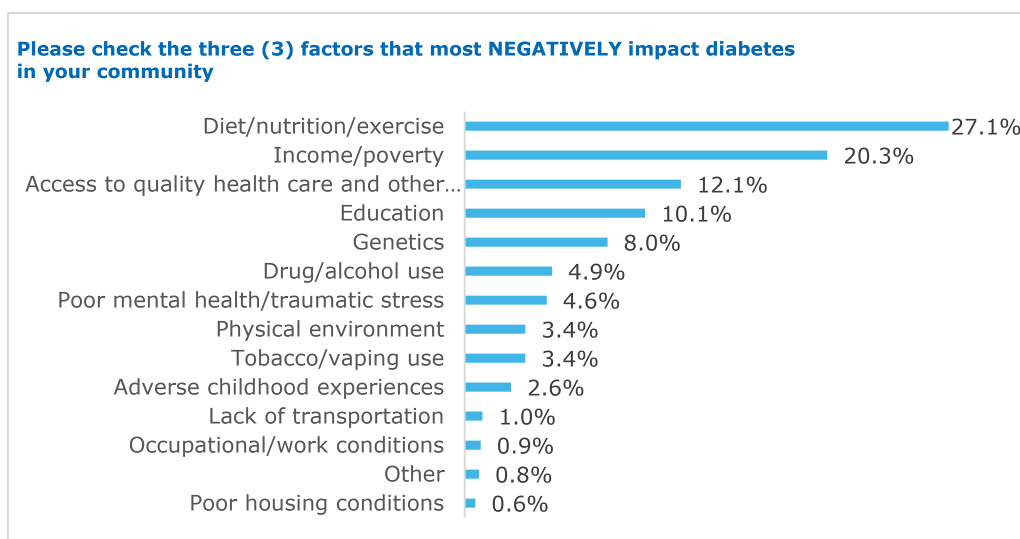
Diabetes is a major public health issue due to its widespread prevalence and severe health impacts. It can lead to serious complications like cardiovascular disease, nerve damage, kidney failure and blindness. Effective management through lifestyle changes, medication and regular monitoring is crucial to prevent these complications. Public health initiatives focusing on healthy eating, physical activity and accessible healthcare can significantly reduce the burden of diabetes, improve quality of life and prevent related health issues.

11%
of adults in Sullivan County have diabetes

Sullivan County has a similar rate of newly diagnosed diabetes cases among adults (20+) each year (11.1 per 1,000) compared to the Appalachian Highlands (11.1 per 1,000), Tennessee (11.1 per 1,000)



Root Causes



Survey participants were asked to identify the three factors that most negatively impact diabetes in their community, essentially pinpointing root causes. The results highlighted diet/nutrition/exercise (27%), income/poverty (20%) and access to quality healthcare (12%).

Understanding these root causes is crucial because they directly influence the prevalence and management of diabetes. Poor diet and lack of exercise are primary contributors to obesity and metabolic disorders, which significantly increase diabetes risk. Income and poverty levels affect individuals' ability to afford nutritious food, healthcare and other resources necessary for diabetes prevention and management. Access to quality healthcare ensures timely diagnosis, effective treatment and education about managing diabetes, which are vital for controlling the disease and preventing complications. Identifying and addressing these root causes can lead to more effective interventions and improved health outcomes for the community.

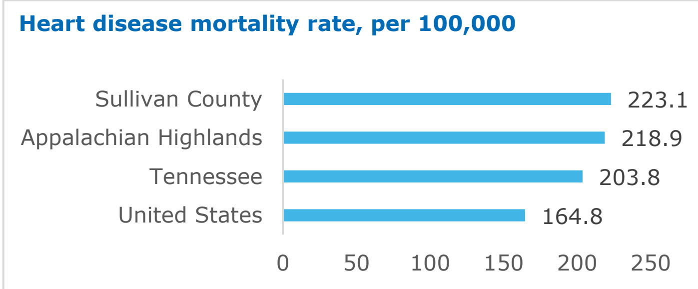
Chronic Disease in Sullivan County

Heart Disease

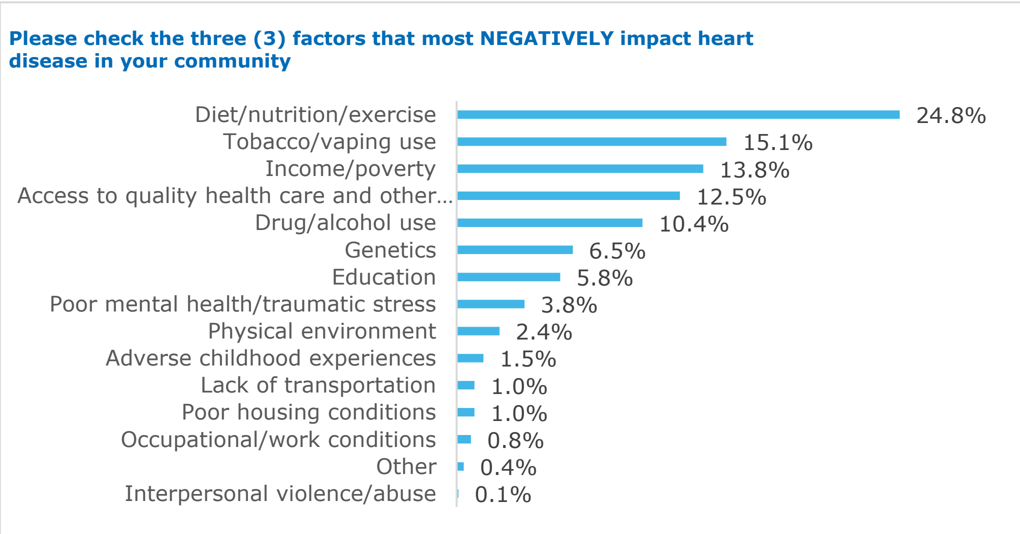
Heart disease is a critical public health issue, being the leading cause of death worldwide. It includes conditions such as coronary artery disease, heart failure and arrhythmias, which significantly impact health and quality of life. Preventing and managing heart disease through a healthy diet, regular exercise, smoking cessation and controlling risk factors like hypertension and diabetes are essential. Effective public health initiatives can reduce the incidence of heart disease, save lives and improve overall community health.

6.3% of adults in Sullivan County have been diagnosed with heart disease

Sullivan County has a higher heart disease mortality rate per 100,000 than the national, state and regional average.



Root Causes

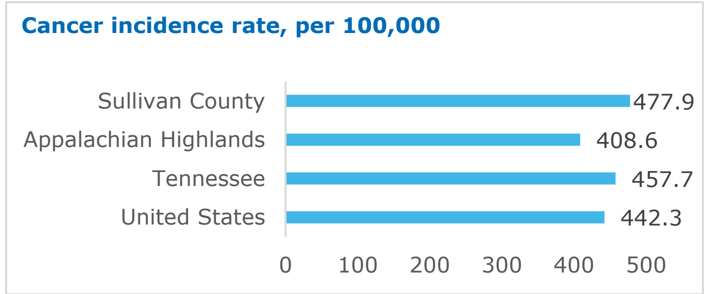


Survey participants were asked to identify the three factors that most negatively impact heart disease in their community, essentially pinpointing root causes. The results highlighted diet/nutrition/exercise (25%), tobacco/vaping use (15%) and income/poverty (14%). Understanding these root causes is crucial because they directly influence the prevalence and severity of heart disease. Poor diet and lack of exercise are well-known risk factors that can lead to obesity, hypertension, and high cholesterol, all of which increase the risk of heart disease. Tobacco use and vaping are significant contributors to cardiovascular problems, exacerbating heart disease through damage to blood vessels and reduced oxygen supply to the heart. Income and poverty levels affect individuals' ability to access nutritious food, healthcare, and other resources necessary for preventing and managing heart disease. Addressing these root causes through public health initiatives can lead to more effective interventions, improved health outcomes, and reduced heart disease rates in the community.

Chronic Disease in Sullivan County

Cancer

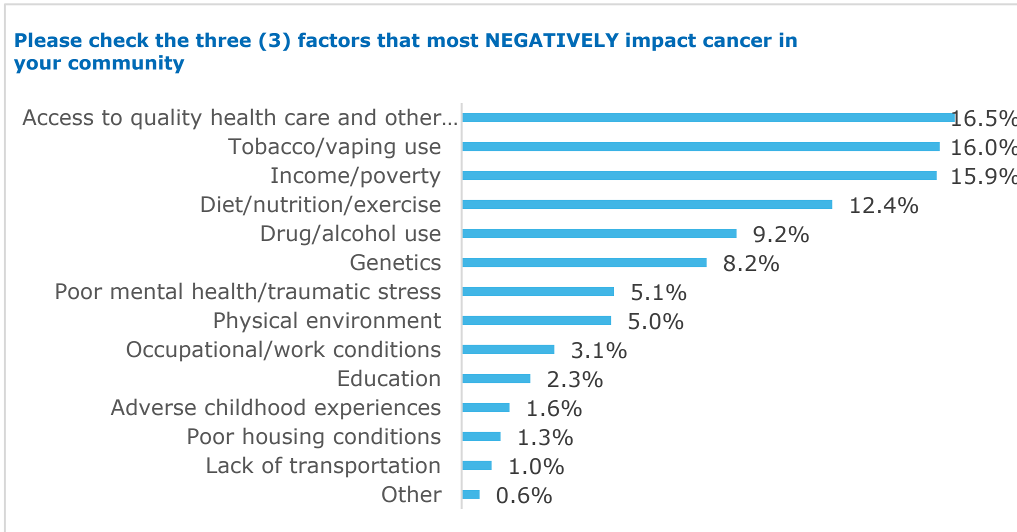
Cancer is significant public health concern because it is one of the leading causes of death worldwide. profoundly affecting individuals and communities. The leading types of cancer include lung, breast, colorectal, prostate and stomach cancer. Public health initiatives can prevent and ease the burden of cancer through strategies such as promoting healthy lifestyles, implementing screening and early detection programs and providing effective treatments and education about risk factors.



In Sullivan County the cancer incidence rate for all sites is 477.9 per 100,000 population, higher than the Appalachian Highlands at 408.6, the United States at 442.3 and the state of Tennessee's rate of 457.7.

Rate of cancer incidence, per 100,000

Root Causes



Survey participants were asked to identify the three factors that most negatively impact cancer in their community, essentially pinpointing root causes. The results highlighted access to quality healthcare (17%), tobacco/vaping use (16%) and income/poverty (16%) as primary contributors. Understanding these root causes is crucial because they directly influence cancer outcomes. Limited access to quality healthcare prevents early detection, timely treatment and effective management of cancer, leading to poorer prognosis and higher mortality rates. Tobacco and vaping use are significant risk factors for various cancers, particularly lung cancer, due to the carcinogenic substances they introduce to the body. Income and poverty levels affect individuals' ability to afford preventive measures, screenings and treatments, exacerbating health disparities. Addressing these root causes through public health initiatives can lead to more effective cancer prevention, improved access to care and better health outcomes for the community.

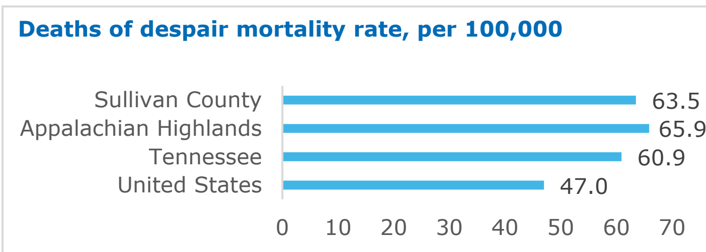
Behavioral/Mental Health in Sullivan County

37% of adults in Sullivan County suffer from either mental health or substance use conditions

6 is the average number of poor mental health days per month for residents in Sullivan County

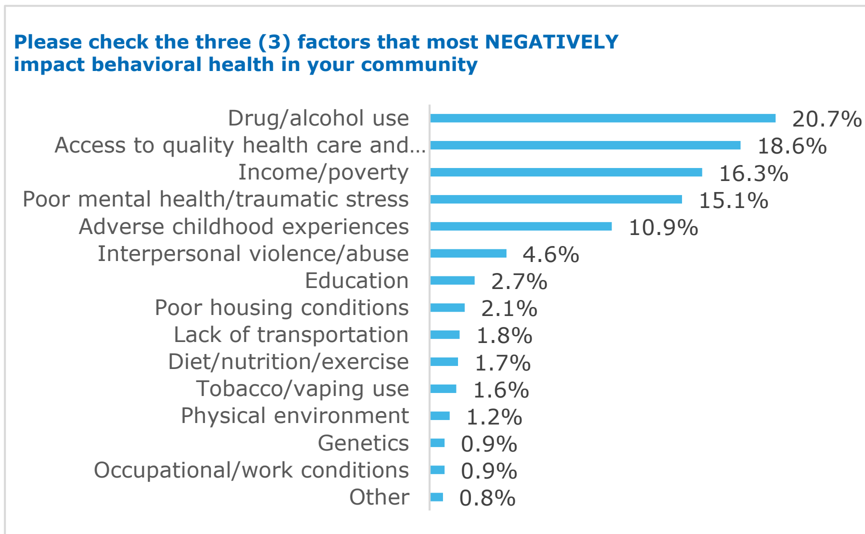
Suicide mortality rate is **20.2** per 100,000 population in Sullivan County

Mental and behavioral health, including suicide prevention, is crucial for community well-being. Mental health conditions like depression and anxiety can severely impact daily life and physical health. Behavioral health issues, including substance use disorders, are essential to address for fostering resilience and improving relationships. Suicide, a significant consequence of untreated mental health issues, is a leading cause of death globally, particularly among youth. Addressing these issues through accessible mental health services, education and support systems is vital for early intervention, effective treatment and recovery, reducing the incidence of crises and suicides and promoting healthier communities.



In Sullivan County the mortality rate for deaths of despair, which include suicide and drug/alcohol overdose deaths, is 63.5 per 100,000 population. This rate is slightly lower than the rate for the Appalachian Highlands, which stands at 65.9 per 100,000 population. Comparatively, Tennessee as a whole has a mortality rate of 60.9 per 100,000 for deaths of despair, while the national rate in the United States is significantly lower at 47 per 100,000 population.

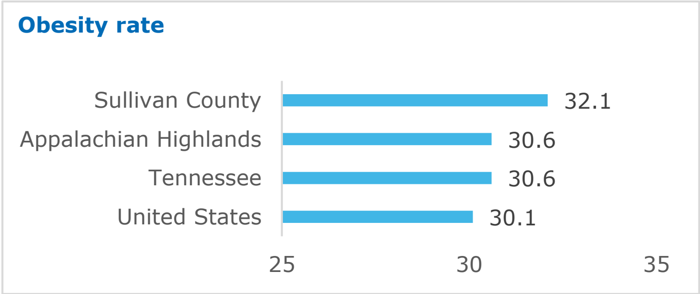
Root Causes



Survey participants were asked to identify the three factors that most negatively impact behavioral and mental health in their community, essentially pinpointing root causes. The results indicated drug and alcohol use (21%), access to quality healthcare (19%) and income/poverty (16%) as primary contributors. Understanding these root causes is crucial because they directly influence mental health outcomes. Substance abuse can exacerbate mental health disorders, leading to a cycle of dependency and deteriorating mental well-being. Limited access to quality healthcare prevents individuals from receiving timely and effective treatment, exacerbating mental health issues. Economic hardship and poverty can lead to chronic stress, anxiety and depression, further impacting mental health. Addressing these root causes through comprehensive public health strategies can lead to more effective interventions, improved access to care and overall better mental health outcomes in the community.

Overweight/Obesity in Sullivan County

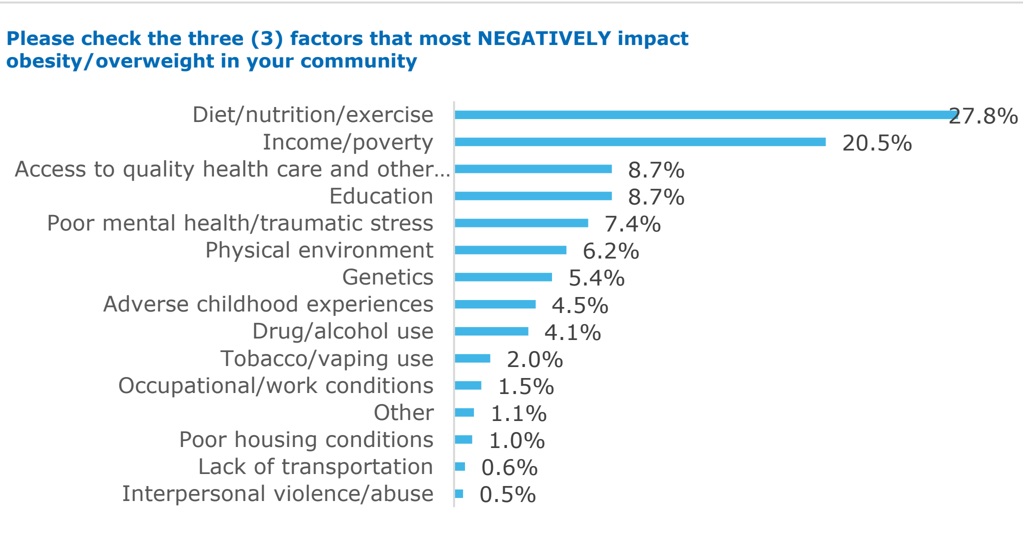
Obesity is a significant public health issue because it is associated with numerous chronic diseases, including heart disease, diabetes and certain cancers, leading to reduced quality of life and increased healthcare costs. The leading causes of obesity include poor diet, lack of physical activity, genetic factors and environmental influences. Preventing and reducing obesity involves promoting healthy eating, encouraging regular physical activity, implementing county-wide health programs and providing education on maintaining a healthy lifestyle. Rurality plays a role in obesity rates due to factors such as limited access to healthy food options, fewer opportunities for physical activity and socioeconomic challenges, making tailored interventions in rural areas essential.



Sullivan County has a higher obesity rate, affecting 32.1% of the population, compared to the Appalachian Highlands at 30.6%, Tennessee overall at 30.6% and the United States at 30.1%.

59.0% have access to exercise opportunities	**34.0%** live within a 1/2 mile from a park	**30.7%** have low access to food	**32.4%** of men are obese	**31.8%** of women are obese	**7** Walkability score (1=Not walkable, 20=Very walkable)

Root Causes



Survey participants were asked to identify the top factors negatively impacting overweight and obesity in their community, highlighting root causes. The results were access to diet/nutrition/exercise (28%), income/poverty (21%) and access to quality healthcare (9%).

These root causes are crucial because limited access to healthy food and exercise leads to poor dietary habits and sedentary lifestyles, major contributors to obesity. Income and poverty restrict the ability to afford nutritious food and exercise opportunities, while access to quality healthcare is essential for effective weight management and addressing related health issues. Addressing these factors through public health initiatives can lead to better interventions and improved health outcomes for the community.

Conclusion

Conclusion

The Community Health Needs Assessment (CHNA) for Sullivan County has provided a comprehensive overview of the most pressing health issues faced by residents. Utilizing the MAPP 2.0 framework, Ballad Health effectively gathered and analyzed primary data from community member surveys, partner surveys and stakeholder convenings, alongside secondary data from national, state, regional and county-specific sources.

The assessment identified Chronic Disease, Behavioral/Mental Health and Obesity/Overweight as the top health priorities, reflecting the community's immediate health concerns. These issues not only affect a significant portion of the population but also have far-reaching implications for the overall well-being and economic stability of the region. While other health challenges exist, these three priorities stand out based on the extensive data collected and analyzed.

By prioritizing these health issues, Ballad Health and its partners can tailor interventions and allocate resources more effectively to address the root causes and improve health outcomes. The community's input has been invaluable in shaping this assessment, ensuring that the strategies developed will be relevant and impactful.

Moving forward, the collaborative efforts of healthcare providers, community organizations and residents will be crucial in tackling these health priorities. Through continued engagement, data-driven decision- making and targeted initiatives, we can work towards a healthier, more vibrant community for all residents of Northeast Tennessee. This CHNA serves as a foundational document, guiding future health initiatives and fostering a shared commitment to enhancing the health and well-being of our communities.
